Our Program:

Our Board Certified Behavior Analyst will conduct vocational assessments through job sampling internships at actual places of employment to help identify the skills and training needs of each individual, and allow us to create a unique Individualized Plan for Employment (IPE) for each of our clients. Our training program includes professional development, social, and life skills training.

Our clients will attend classes tailored to the unique learning style of individuals on the Autism Spectrum, which will emphasize social skills needed in the workplace and personal skills needed to support an independent life style.

Clients will have the opportunity to shadow employees in actual places of employment, and practice the skills that they learn during our classes. Towards the end of the program our clients will work with us to find an employment opportunity that interests them. Our team will support our clients as they strive to obtain that job while receiving competitive salaries, and we will help prepare our clients for the subsequent job duties.

Spectrum Success uses an assortment of assessments to evaluate your strengths and interests to help determine what career is right for you. Our training program will then teach you the social and communication skills needed to thrive in the workplace.

This program is tailored to the Asperger Syndrome and High Functioning Autism Communities, as well as anyone who has social or behavioral issues that impede employment.
